→ we need to add the functionalities that are in the code already
Non-Functional:

- Security:
  - Change the password box, so that the password is not showing when the user is typing it in, add a checkbox for the user to make the password visible
  - Password encryption
  - Data encryption
- GUI:
  - The desire is that the GUI is appealing and user-friendly
    - If we ensure that the GUI is responsive it will be more user friendly how

Functional:

- Login:
  - Add error indications in the login screen → effectively guiding the users to input a valid username and password
- Profile:
  - Allowing users to customize their profiles after the initial setup
    - Adding pictures to your profile
    - Removing pictures from your profile
    - Changing profile details such as profile picture, bios and profile name.
- User interactivity:
  - Immediate alert upon recent activities account related
    - Remove minor and inconvenient glitches.
      1. Add and fix issues with picture liking, make sure one profile can like a picture once and unlike when necessary.
    - If followed the user that has been followed will receive an alert, add the notifications for new followers
    - If the user receives a Like the user should also get an alert, add notification for likes
    - Add a commenting system with a sub commenting system.
      1. Make the comments replyable with a button.
      2. Make comments likable by all users.
      3. Make comments deletable by the posting user using a separate button.
    - Create a USER AGREEMENT pop-up for ensuring that the user knows the rules of the platform.
    - Create an option for users to turn on and off mature language.
    - Add error indication to certain fail points, such as when the post wasn't able to get published due to a network issue.

- App Navigation:
  - Allow the user to search for other users through a search bar
    - Make the search based on name and make it accurate.
